

THE STANDARD RIVET CO.  
ROOM 10, 105 SUMMER ST.,  
BOSTON, MASS.

since writing as below. I have tried another size  
of rivet marked D. in sample and I think  
that will work better than the others

Boston Jan'y 19<sup>th</sup> 1892

Miss Noble & Cooley

No 229 Broadway New York City

Gentlemen We have your esteemed  
favor of 18<sup>th</sup> inst. We think our  
Machine & Rivet will do the work you  
require as per sample. referring to  
which would say "A.A.A" represent the  
first rivets we drove. they were not heavy  
enough. "B.B.B" are heavy rivets driven  
with the grain of the wood and "C.C.C"  
are the same, driven across the grain.  
the only trouble seems to be that the wood  
is liable to split and we cannot tell  
much about this until we know how  
far apart you would drive the rivets.  
if you will send us a piece say a  
foot or 2 feet long with the tin piece  
marked where you wish the rivets driven  
we will drive them and return to you -  
of course if the writing could be done  
when the wood was not so dry. it would  
work better.

Yrs very truly

The Standard Rivet Co.
